MicroRNA-188 aggravates contrast-induced apoptosis by targeting SRSF7 in novel isotonic contrast-induced acute kidney injury rat models and renal tubular epithelial cells

In the article entitled “MicroRNA-188 aggravates contrast-induced apoptosis by targeting SRSF7 in novel isotonic contrast-induced acute kidney injury rat models and renal tubular epithelial cells” (1), there is an error.

In *Figure 1C*, the pathological changes of renal tissues of rats was wrongly presented and the corrected version is as follows:

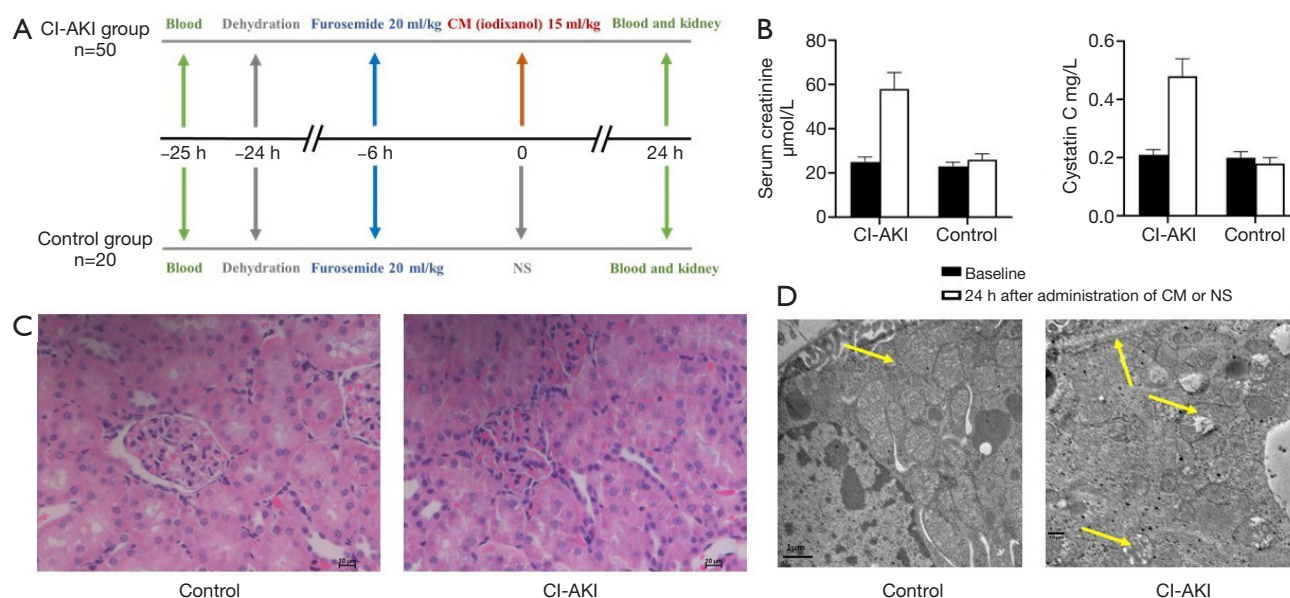

Figure 1 Successful establishment of isotonic CI-AKI rat model. (A) Experimental grouping and operation procedures of establishing the isotonic CI-AKI rat model (CI-AKI group) and control group; (B) serum creatinine (Scr) and cystatin C (Cys C) levels of rats; the measurement data were expressed as mean \pm standard deviation; (C) pathological changes of renal tissues of rats detected and evaluated by HE staining (400 \times ; scale bar =25 μ m); (D) subcellular changes of renal tissues of rats detected and evaluated by electron microscope. Yellow arrow in control group shows normal mitochondrion. While yellow arrows in CI-AKI group shows glomerular basement membrane thickening and mitochondrion swelling.

We regret the error.
